

# Package ‘conveniencefunctions2’

October 11, 2021

**Type** Package

**Title** Convenience functions for R for QBS181, the second iteration.

**Version** 0.1.0

**Author** Joshua Levy

**Description** We provide general utilities for common tasks in the R programming language.

**License** MIT

**Depends** R (>= 3.5.0)

**Encoding** UTF-8

**LazyData** true

**Imports** stats,  
ggplot2

**RoxygenNote** 7.1.0

## R topics documented:

completeFun . . . . .	1
factorial . . . . .	2
gm_mean . . . . .	3
Modes . . . . .	3
nonUnique . . . . .	4
<b>Index</b>	<b>5</b>

---

completeFun	<i>Drop NAs by Columns</i>
-------------	----------------------------

---

## Description

Remove NAs based on specified columns in the data

## Usage

```
completeFun(data, desiredCols)
```

**Arguments**

<code>data</code>	data.frame object of observations
<code>desiredCols</code>	list of columns from which to drop incomplete cases by

**Value**

Data frame with removed observations

**Examples**

```
data <- data.frame(a=1:4,b=c("a","b","c","d"),c=c(NA,"keep",NA,"keep"))
completeFun(data, c("c"))
```

---

`factorial`*Factorial*

---

**Description**

Function that calculates factorial of integer Note: this function is recursive!

**Usage**

```
factorial(x)
```

**Arguments**

<code>x</code>	Integer
----------------	---------

**Value**

Factorial integer

**Examples**

```
x <- 13
factorial(x)
```

---

`gm_mean`*Geometric mean*

---

**Description**

Function to calculate geometric mean

**Usage**

```
gm_mean(x, na.rm = TRUE)
```

**Arguments**

<code>x</code>	numeric vector
<code>na.rm</code>	bool, should vector be removed?

**Value**

float

**Examples**

```
x <- c(1.4, 1.6, NA, 5.2, 6.5, 6.5)
gm_mean(x, na.rm=T)
```

---

`Modes`*Mode*

---

**Description**

Function to calculate the mode of a variable

**Usage**

```
Modes(x)
```

**Arguments**

<code>x</code>	numeric vector
----------------	----------------

**Value**

Numeric vector of modes

**Examples**

```
x <- c(1, 1, 3, 5, 6, 6)
Modes(x)
```

---

`nonUnique`*Non-Unique*

---

**Description**

Function that returns a list of non-unique values from a supplied list

**Usage**

```
nonUnique(x)
```

**Arguments**

<code>x</code>	vector/list
----------------	-------------

**Value**

vector/list

**Examples**

```
x <- c(1,1,3,5,6,6)
nonUnique(x)
```
